

CRISTIE **RECOVERY** ASSURANCE

- 01. Check for new backups
- 02. Perform a restore to a clean room
- 03. Measure the restore and validate results, including anomaly detection
- 04. Publish multitenant report (NIS2/DORA)

Automated and continuous restore testing.

Natively integrated with your backup platform.

Reporting aligned with NIS2 and DORA requirements.

Traditional Disaster Recovery focuses on backup and replication—but rarely proves that recovery will actually work.

Cristie Recovery Assurance transforms Restore and DR into a recovery-certified service by automatically and continuously verifying that protected systems can be fully recovered in a clean, isolated environment.

THE CHALLENGE

- Restore and DR often lacks automated recovery verification
- Backups may be corrupt, misconfigured, or unrecoverable
- Manual DR testing is infrequent, costly, and disruptive
- Customers increasingly demand proof of recoverability, not just backups

THE CRISTIE SOLUTION

Continuous Recovery Assurance automatically performs a full system recovery test every time a new backup is created—without impacting production systems. Recovery is validated in a secure clean room environment, ensuring systems can boot and operate as expected.

KEY CAPABILITIES

- Automated recovery verification after every backup
- Supports regulatory and cyber-resilience requirements
- Clean room recovery testing isolated from production
- Non-disruptive and continuous assurance
- Full system validation, with NIS2/DORA compliant reporting
- Included in Cristie Recovery Solution.

WHO

- Managed Service Providers (MSPs) delivering DRaaS
- Cloud and DRaaS providers seeking differentiation
- Enterprises running private or hybrid DRaaS, DR and recovery models
- Organizations needing continuous cyber-recovery validation

CRISTIE RECOVERY ASSURANCE – INCLUDES:

Automated Restore Testing	Scheduled, automated restore testing for virtual and physical machines with comprehensive reporting (NIS2/DORA)
Bare Metal Recovery (BMR)	Dissimilar hardware recovery to CVP-2 / CVP for physical systems.
Recovery Orchestration	Coordinated, repeatable recovery workflows ensuring proven, audit-ready recoverability.
On-Prem Installation	Fully deployable on-premises and ready for dark-site and isolated environments.
